Next week would be better for me. I'm trying to check with a few people for more info, but will try to get back to you today or Monday about when might be a good time to discuss. In the meantime, here's a website that someone showed me that has info on PFOA.

FW: SpectraWatt company site visit next week

John,

Based on the information below, I am asking for any guidance you may have or even contact information from the information you emailed previously. I have received information from the company and they appear to be discharging about 125,000 gpd which is nothing to sneeze at. I do not know what concentration of PFOA to expect in the wastewater discharge. If you are able to discuss this early later today or early next week, I would be appreciative. Also, this site used to have a direct discharge permit through PA DEP. I am not certain how much they have been kept in the loop or if it is something the company would even consider. Thanks for your help.

Subject: SpectraWatt company site visit next week

Importance: High

Last night I received an agenda from the company for their site visit. This visit will include their engineering team from CH2M (about 8 people).

The company is asking if you can both meet with them on **Thursday morning, January 15th at 9:00 a.m. at StonePointe**. I am sorry for the prior confusion where I asked for your availability on Wednesday afternoon. Please let me know as soon as possible if you can make this meeting. This is the company's third visit to the site and we heard yesterday that the letter from the Governor providing incentives was pretty aggressive, so we are very optimistic.

Steve also state that you will also be receiving waste stream information directly from him:
